Professional Summary

Software Engineer with 4+ years of experience across full-stack development, AWS cloud infrastructure, and DevOps practices. Hands-on experience with AWS services including EC2, VPC, IAM, S3, RDS, Security Hub, Config, and CloudWatch. Experienced in CI/CD pipeline implementation using GitHub Actions and Azure DevOps, cloud cost optimisation through reserved and right-sized instances, and designing secure network architecture including private subnets, NAT gateways, and Security Groups. Background in financial risk data systems (American Express) and enterprise application development.

Technical Skills

AWS Core: EC2, VPC, IAM, S3, RDS, ELB, NAT Gateway, Subnets, Routing Tables, Security Groups

AWS Security & Compliance: AWS Security Hub, IAM, Private Subnet Architecture, Security Alerts & Compliance

AWS Monitoring: CloudWatch (Application Logs, EC2 Metrics, App Runner Metrics, Alarms), New Relic

FinOps & Cost Management: Reserved Instances, Right-Sized Instances, Load Balancing, Cost Optimisation Strategies

CI/CD & DevOps: GitHub Actions, Azure DevOps, CI/CD Pipeline Implementation, Automated Deployment

Frontend: React, Flutter (mobile), HTML5, CSS3, JavaScript (ES6+), UI/UX Design

Backend: Node.js, Express.js, PHP, REST APIs

Databases: MongoDB, MySQL, AWS RDS, Private Subnet Database Architecture

Integrations: Shopify API, Unleashed API, Xero API, Spark layer

Data Engineering: Hadoop, Hive, Spark, Big Data Pipelines, Data Quality & Performance Tuning

Languages: JavaScript, PHP, Python, Java, C

IT Infrastructure: Network Troubleshooting, LAN/WAN/WLAN, IAM, Windows Server, Microsoft 365

Methodologies: Agile/Scrum, SDLC, Requirements Gathering, UAT, Technical Documentation

Professional Experience

Software Engineer

Jun 2025 – Present

Remote King – Hallam, Melbourne

- Designed and developed PickOps — a full-stack warehouse management system (MERN stack) integrating with Unleashed via REST API, with Flutter mobile apps for barcode scanning and order fulfilment, hosted on AWS
- Designed and developed OnTime — a geofence-based employee clock in/out application (MERN stack) integrated with Xero for leave management and payslip access, live and used daily by Remote King employees
- Designed and developed AutoIDX — a smart automotive parts identification platform (MERN stack) integrated with Shopify, with CI/CD deployment pipeline implemented via GitHub Actions for automated build and deployment
- Currently developing All Remotes — a complete retail e-commerce platform in React, Node.js, MySQL, and AWS
- Configured and managed AWS infrastructure including EC2, RDS, S3, VPC, ELB, Security Groups, and IAM policies
- Implemented private subnet architecture ensuring database instances (RDS) are only accessible through private subnets, with NAT gateway for outbound internet access
- Monitored application health and performance using CloudWatch — tracking EC2 metrics, application logs, and App Runner metrics, with custom alarms configured for threshold breaches
- Implemented FinOps practices including reserved instances and right-sized EC2 instances to optimise cloud spend without compromising performance
- Used AWS Security Hub and AWS Config for compliance checks and security configuration validation across cloud infrastructure
- Built and maintained REST API integrations with Shopify, Unleashed, Xero, and Sparklayer

IT Support Officer (E-Exam Support)

Oct 2025 – Present

Monash University – Melbourne

- Provided real-time Level 1/2 technical support for large-scale e-examinations across multiple campuses under strict SLAs
- Diagnosed and resolved hardware, login, and network connectivity issues in zero-downtime, high-pressure environments
- Supported device imaging, setup, system validation, and AV equipment across multiple examination venues

Software Engineer

Jan 2023 – Jan 2025

CBI Electric – Hallam, Melbourne

- Built a Stock Order and Production Management System in PHP and MySQL, initially deployed on AWS with VPC subnet configuration, Security Groups, and IAM roles for secure access control, then migrated to a local server for internal-only access
- Configured VPC architecture during AWS deployment including subnets, routing tables, and Security Groups to ensure secure and isolated application environments
- Provided desktop support for PCs, printers, and internal applications; troubleshoot LAN/WAN connectivity and hardware faults
- Supported AWS-hosted systems and automated stock and production workflows to improve operational efficiency

System Engineer

Feb 2021 – Aug 2022

Tata Consultancy Services – Hyderabad, India

- Embedded within the American Express Risk team — developed Hive queries to monitor Key Risk Indicators (KRIs) and identify anomalies in large-scale financial transaction data
- Designed and implemented scalable big data solutions using Hadoop, Hive, and Spark supporting data-driven decision making
- Conducted data quality checks, performance tuning, and workflow optimisation across cross-functional teams
- Worked within Agile/Scrum delivery cycles across sprint planning, stand-ups, and retrospectives

Projects

PickOps — Warehouse Management System | MERN Stack, Flutter, AWS, Unleashed API

- Production warehouse management platform with full Unleashed API integration for real-time inventory synchronisation
- Flutter mobile app used daily by warehouse staff for barcode scanning and order fulfilment; hosted on AWS with private subnet database architecture

OnTime — Employee Clock In/Out App | MERN Stack, Flutter, AWS, Xero API

- Geofence-based attendance and HR application integrated with Xero for leave applications, balance checks, and payslip access

AutoIDX — Automotive Parts Identification Platform | MERN Stack, Flutter, Shopify API, GitHub Actions

- Smart identification tool for automotive professionals with Shopify integration; CI/CD pipeline via GitHub Actions for automated deployment

All Remotes — Retail E-Commerce Platform | React, Node.js, MySQL, AWS

- Complete retail platform in development — sole developer responsible for full-stack architecture, UI/UX, APIs, database, and AWS deployment with CloudWatch monitoring

Education

Master of Information Technology (Cloud Computing, DevOps)

2022 – 2024

Swinburne University of Technology – Melbourne, Australia

Bachelor of Technology — Electronics & Communications Engineering

2016 – 2020

Jawaharlal Nehru Technological University – Hyderabad, India

Certifications & Professional Development

- Currently pursuing: AWS Certified Cloud Practitioner
- Currently pursuing: AWS Certified Developer – Associate
- Currently pursuing: ITIL Foundation
- Victorian Working with Children Check (Employee) — current
- Full Australian driver's licence — current
